

# Filtration Coolers

Let's face it: In most cases, the water available in our buildings is drinkable but has too much chlorine or other bad tastes, and is not icy cold like we like it! A filtered cooler takes care of these problems as well as having substantial benefits over bottled water. There is no water to buy, no bottles to store or lug, and no bottle deposits to pay!

Filtration coolers are connected directly to your water supply but remove impurities, chlorine, lead & cysts, as well as off tastes & odors. Our filtration coolers offer both hot & cold faucets to handle all your water needs.

So let us take away all the worries you have about drinking water! We will install a filtered cooler including all the plumbing and the filter at no charge. The filters are also changed at no charge to you. Your only cost is the \$30.00 per month rental charge.

That's it! No other charges! No deposits to pay or water to buy! There is no contract to sign. You may cancel the service at any time. So call today and let us start you on the course of worry-free water!
